But what about Macs? As with any other brand, some Apple computers are more fit for the purpose than others.. As of the writing of this article there aren't really 5k options available for the PC world, and I can confirm that even as a hobbyist a high resolution monitor is a VERY big deal.. In this article, we look at the best Macs for photographers, compare their characteristics, and discuss the most popular photo editing software.. Not to mention the exceptionally long battery life that provides the opportunity to work away from a charging port for an entire day.. A Retina display with a substantial pixel density is what you're looking for—regardless of the size of the project you're working on.
